USER STORIES

Authentication & Session Management

US-01: User Registration System

Priority: 1
Estimated Time: 6h

Description

AS A player
I WANT TO create a new account
SO THAT I can access the game and save my progress

Acceptance Criteria

- Username input field rendered on canvas
- Password input field rendered on canvas
- Create Account button visible and distinct on logInScene
- Create createAccountScene similar to logInScene but with name and age fields
- Input focus switches correctly between fields
- Keyboard input captured per active field
- Error message shown if username already exists
- Form follows existing UI patterns (drawInputBox, drawButton)

US-02: Authentication API Integration (Register & Login)

Priority: 1
Estimated Time: 7h

Description

AS A player
I WANT TO log in through the API
SO THAT my account is validated and my session can start with my stored data

Acceptance Criteria

- Username input field rendered on canvas
- Password input field rendered on canvas
- Start button visible and distinct on menuScene
- Create logInScene
- Button Confirm sends POST `/log in`
- Empty fields validation before request
- Successful login → player_id stored in global state + redirect to character selection scene
- Invalid login → error message displayed

Backend API & Database

US-03: API Server Setup

Priority: 1
Estimated Time: 5h
Sprint:

Description

AS A developer
I WANT TO have a working API server
SO THAT the frontend can communicate with the database, set up Node.js + Express server connected to MySQL using environment variables.

Acceptance Criteria

- Node.js project initialized
- Express server running
- MySQL connection configured via `.env`

- Server listens on defined port
- GET `/ping` returns 200 OK

US-04: Database Schema Deployment

Priority: 1
Estimated Time: 4h

Description

AS A developer
I WANT TO deploy the database schema
SO THAT all systems have structured data to work with

Acceptance Criteria

- All 9 tables created
- Seed data inserted (archetypes, levels, cards)
- Constraints verified (FK, cascade, restrict)
- Test inserts validate integrity

US-05: Catalog API Endpoints (GET)

Priority: 1
Estimated Time: 4h

Description

AS A developer
I WANT the game system to retrieve catalog data
SO THAT gameplay elements can be loaded dynamically

Acceptance Criteria

- GET `/archetypes`

- GET `/levels`

- GET `/cards`

- GET `/enemies`
- `GET/player`

- Data returned from SQL views

- JSON format responses

US-06: Session Write Endpoints

Priority: 1
Estimated Time: 7h

Description

AS A developer

I WANT the game system to store gameplay session data
SO THAT player progress and statistics are saved

Acceptance Criteria

- POST `/run`

- PUT `/card_deck`

- POST `/level-reached`

- POST `/card-used`

- POST `/score/fame obtained`
- `POST /b`

- All endpoints validate required fields

- POST returns inserted ID

US-07: SQL Views for Catalog & Statistics

Priority: 2
Estimated Time: 6h

Description

AS A developer
I WANT TO use SQL views
SO THAT data integrity and statistics are maintained

Acceptance Criteria

- Views for catalog tables
- View: win rate per archetype
- View: most used cards
- View: kill rate per enemy
- View: avg completion time per level

CORE GAMEPLAY SYSTEM

US-08: Player Horizontal Movement

Priority: 1
Estimated Time: 5h
Sprint:

Description

AS A player
I WANT TO move left and right
SO THAT I can navigate the arena

Description

Implement smooth horizontal movement with arrow keys, respecting arena boundaries.

Acceptance Criteria

- Left Arrow → move left

- Right Arrow → move right
- Movement stops when key is released
- Player cannot cross arena boundaries
- Movement speed is variable type const
- Movement feels responsive

US-09: Jump & Gravity System

Priority: 1
Estimated Time: 5h
Sprint:

Description

AS A player
I WANT TO jump
SO THAT I can avoid enemies and obstacles

Description

Implement vertical physics with jump and gravity.

Acceptance Criteria

- Space triggers jump
- Gravity applied every frame
- Player lands correctly on floor
- Double jump allowed (easter egg)
- Jump arc is smooth

US-10: Platform Collision System

Priority: 1
Estimated Time: 6h

User Story

AS A player
I WANT TO land on platforms
SO THAT I can navigate vertically

Description

Detect top collisions and allow walking across platforms.

Acceptance Criteria

- Player lands on top of platform
- Downward movement stops on collision
- Player walks on platform
- Player falls off edges naturally
- Side collisions do NOT teleport player

US-11: Basic Attack System

Priority: 1
Estimated Time: 5h
Sprint:

Description

AS A player
I WANT TO attack enemies
SO THAT I can defeat them

Acceptance Criteria

- J triggers attack
- Attack sprite appears
- Only one attack active at a time
- Enemy HP reduced correctly

- Uses `start_damage` + modifiers

🟣 US-12: Enemy Death System

Priority: 1
Estimated Time: 4h

Description

AS A player
I WANT TO defeat enemies
SO THAT I can progress in the level

Acceptance Criteria

- Enemy removed when HP ≤ 0
- No collision after death
- Kill counter increases
- Death handled cleanly (no bugs)

US-13: Player Damage System

Priority: 1
Estimated Time: 3h
Sprint:

User Story

AS A player
I WANT TO receive damage
SO THAT the game has challenge

Acceptance Criteria

- Enemy contact damages player
- HP decreases correctly
- Health bar updates

- Death triggered at 0 HP

US-14: Lives System

Priority: 1
Estimated Time: 4h

Description

AS A player
I WANT TO have multiple lives
SO THAT I can retry the level

Acceptance Criteria

- Start with 5 lives
- On death → lose 1 life
- Current level resets
- HP restored
- Deck preserved (all unused cards)
- Lives = 0 → Game Over
- If Game Over, resets all run and keeps only 1 unused card
- Power-up card can modify life loss

US-15: Pause System

Priority: 2
Estimated Time: 4h

Description

AS A player
I WANT TO pause the game
SO THAT I can control my session

Acceptance Criteria

- ESC pauses current level/run
- Overlay menu appears
- Continue resumes game
- Home triggers Game Over (with confirmation)
- Restart subtracts life + resets level
- All timers pause correctly

CARD SYSTEM

US-16: Card Event Trigger System

Priority: 1
Estimated Time: 4h

Description

AS A player
I WANT TO receive a card event mid-level
SO THAT gameplay becomes dynamic and strategic

Acceptance Criteria

- Fetch `target_time` from API at level start
- Track elapsed time excluding pauses
- Trigger event at `random < target_time`
- Event fires ONLY once per level
- Game pauses automatically when triggered

US-17: Card Selection UI

Priority: 1
Estimated Time: 5h

Description

AS A player
I WANT TO choose between cards
SO THAT I can influence my run

Display 3 selectable cards with confirmation logic.

Acceptance Criteria

- 3 cards displayed centered on canvas
- Only one card selectable at a time
- Confirm button appears after selection
- Back button resets selection
- Confirm applies card and resumes game

US-18: Card Distribution Logic

Priority: 1
Estimated Time: 4h
Sprint: 4

User Story

AS Adeveloper
I WANT the game system to generate balanced card options
SO THAT gameplay remains fair and dynamic

Description

Control which cards appear depending on level and fame.

Acceptance Criteria

- Level 1 → always 2 powerups + 1 punishment
- Level 2–3 → weighted random based on fame
- Higher fame → higher punishment probability + higher reward for player
- No duplicate cards in same event

- No repeated cards within same level

US-19: Powerup Card Effects

Priority: 1
Estimated Time: 6.5h

Description

AS A player
I WANT TO gain temporary or permanent boosts
SO THAT I can improve my performance

Implement all 8 powerups with stacking and duration logic.

Acceptance Criteria

- Speed boost applied correctly
- Damage boost applied correctly
- Healing works instantly
- Enemy slow effect works
- Shield blocks next hit
- Kill-based healing works
- AoE attack works
- Card preview ability works
- All temporary effects expire cleanly

US-20: Punishment Card Effects

Priority: 1
Estimated Time: 6.5h

Description

AS A player
I WANT TO face negative effects
SO THAT the game becomes more challenging

Acceptance Criteria

- Extra enemies spawn correctly
- Jump disabling works
- Card usage costs HP
- Instant HP loss works
- Screen darkening effect works
- Damage reduction applied correctly
- Double-life-loss effect works
- All effects expire correctly

FAME AND PROGRESSION SYSTEM

US-21: Fame Calculation & Rewards

Priority: 1
Estimated Time: 5h
Sprint: 5

Description

AS A player
I WANT TO receive rewards based on my performance
SO THAT my gameplay evolves across levels

Acceptance Criteria

- Fetch `target_time` from API
- Compare completion time vs target

- Faster → Famous rewards applied
- Slower/equal → Not Famous rewards
- Deck pool updated correctly
- Result stored in global state
- POST `current_level` to API

US-22: Fame Bar UI

Priority: 2
Estimated Time: 2.5h
Description

AS A player
I WANT TO see my fame progression
SO THAT I understand my performance

Description

Animate fame bar after level completion.

Acceptance Criteria

- Fame bar fills smoothly
- Reflects current accumulated fame
- Animation completes before transition
- No overflow beyond limits

Website & Presentation Layer

US-23: Main Website Layout

Priority: 2
Estimated Time: 6.5h

Description

AS A web visitor
I WANT TO navigate the website
SO THAT I can explore the game and its content.

Acceptance Criteria

- Navigation bar with tabs (Home, Story, Tutorial, Credits)
- Canvas centered in Home
- Placeholder content for all sections
- Roman-themed UI consistent
- Accessible without login

US-24: Real-Time Statistics Panel

Priority: 2
Estimated Time: 6h
Sprint: 6

Description

AS A user
I WANT TO see live game statistics
SO THAT I understand overall performance trends

Acceptance Criteria

- Panel surrounds canvas without overlap
- Shows total runs, wins, defeats
- Shows most used archetype
- Shows most used card
- Shows avg completion time

- Auto-refresh without reload
- Handles empty state
- Handles API errors

US-25: Tutorial & Story Content

Priority: 3
Estimated Time: 4h
Sprint: 6

Description

AS A player
I WANT TO understand the game
SO THAT I can play correctly and enjoy the story

Acceptance Criteria

- Controls explained clearly
- Lives system explained
- Fame system explained
- Card system explained
- Archetypes explained
- Story per level documented
- Content matches actual gameplay

FUNCTIONAL REQUIREMENTS (FR)

Authentication

FR-01 The system must allow users to register with a username and password
FR-02 The system must validate that usernames are unique

FR-03 The system must allow users to log in
FR-04 The system must display error messages for invalid credentials

Gameplay Core

FR-05 The player must be able to move left and right
FR-06 The player must be able to jump
FR-07 The system must apply gravity to the player
FR-08 The player must be able to attack enemies
FR-09 Enemies must lose HP when attacked
FR-10 Enemies must be removed when HP reaches zero
FR-11 The player must receive damage from enemies
FR-12 The system must track player lives
FR-13 The system must reset the level when the player dies
FR-14 The system must end the game when lives reach zero

Environment & Interaction

FR-15 The player must be able to interact with platforms
FR-16 The player must collide correctly with game objects

Pause System

FR-17 The player must be able to pause the game
FR-18 The system must display a pause menu
FR-19 The player must be able to resume, restart, or exit

Cards System

FR-20 The system must trigger a card event mid-level
FR-21 The system must display 3 selectable cards
FR-22 The player must be able to select one card
FR-23 The system must apply card effects
FR-24 The system must generate cards based on level and fame
FR-25 The system must prevent duplicate cards in a level

Fame System

FR-26 The system must calculate player performance after each level
FR-27 The system must assign rewards based on performance

FR-28 The system must update the player's deck pool
FR-29 The system must display a fame bar

Backend & Data

FR-30 The system must store player session data
FR-31 The system must retrieve game data from the database
FR-32 The system must expose API endpoints
FR-33 The system must validate API requests

Web

FR-34 The system must display a website with navigation tabs
FR-35 The system must display the game canvas
FR-36 The system must display real-time statistics
FR-37 The system must display tutorial content
FR-38 The system must display story content

NON-FUNCTIONAL REQUIREMENTS (NFR)

Performance

NFR-01 The game must run at a stable frame rate (≥ 30 FPS)
NFR-02 API responses must return within 2 seconds

Usability

NFR-03 The UI must be clear and intuitive
NFR-04 The player must understand controls without external help
NFR-05 Error messages must be clear and visible

Reliability

NFR-06 The system must handle API failures gracefully
NFR-07 The game must not crash due to invalid input
NFR-08 Game state must remain consistent after pause/resume

Security

NFR-09 The frontend must not connect directly to the database
NFR-10 User credentials must be validated securely

Maintainability

NFR-11 Code must follow modular structure (scenes, objects, API)
NFR-12 The system must use reusable UI components (MessageBase, etc.)

Compatibility

NFR-13 The game must run in modern web browsers
NFR-14 The system must work locally for all team members

ISSUES

"During early sprints, we will use mocked/local data to simulate backend behavior, and later replaced it with real API integration."

SPRINT 1 – FRONTEND + BASIC GAME (NO BACKEND)

Issue 1: [frontend] Render login inputs

🚀 Technical Description
Draw username and password input boxes on canvas using existing UI patterns (drawInputBox). Ensure both fields are visible and properly aligned.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Notes
Restriction: Must follow existing UI patterns used in logInScene.js

🚀 Checklist

- Username input box rendered
- Password input box rendered
- Inputs aligned correctly
- Inputs visible on canvas

Issue 2: [frontend] Handle input typing and focus

🚀 Technical Description
Implement logic to detect which input field is active and capture keyboard input accordingly. Only the selected input should receive typed characters.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Notes
Restriction: Only one input field can be active at a time

🚀 Checklist

- Clicking username activates it
- Clicking password activates it
- Typing updates active field
- Switching fields works correctly

Issue 3: [frontend] Implement login button interaction

🚀 Technical Description
Create a login button and detect click events. The button must trigger validation logic when clicked.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
1.5h

🚀 Checklist

- Button rendered
- Click detection works
- Button visually distinct
- Click triggers function

Issue 4: [frontend] Mock login validation

🚀 Technical Description
Implement a temporary login validation using hardcoded credentials (e.g., username: "test", password: "1234"). Display success or error message.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Notes
Limitation: Temporary logic until API is implemented

🚀 Checklist

- Hardcoded credentials checked
- Success message displayed
- Error message displayed
- No API call used

Issue 5: [gameplay] Implement left and right movement

🚀 Technical Description
Add keyboard controls (A/D or arrow keys) to move the player horizontally.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- A moves left
- D moves right
- Arrow keys work
- Movement responsive

Issue 6: [gameplay] Add movement boundaries

🚀 Technical Description
Prevent the player from moving outside the arena limits.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Left boundary enforced
- Right boundary enforced
- Player stops at edges

Issue 7: [gameplay] Smooth movement handling

🚀 Technical Description
Ensure movement stops immediately when key is released and feels smooth during continuous input.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Movement stops on key release
- No jittering
- Smooth transitions

Issue 8: [gameplay] Implement jump trigger

🚀 Technical Description
Trigger jump when Space key is pressed by applying initial upward velocity.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Space triggers jump
- Upward velocity applied
- Jump starts correctly

Issue 9: [gameplay] Apply gravity system

🚀 Technical Description
Apply gravity force every frame to bring the player back down after jumping.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Gravity applied each frame
- Player falls naturally
- Landing detected

Issue 10: [gameplay] Prevent double jump

🚀 Technical Description
Ensure the player cannot jump again while already in the air.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
1.5h

🚀 Checklist

- Jump disabled mid-air
- Jump re-enabled on landing

Issue 11: [frontend] Setup gameScene structure

🚀 Technical Description
Create the base structure for gameScene including update loop and render function.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Scene initialized
- Update loop created
- Render function working

Issue 12: [frontend] Implement scene switching

🚀 Technical Description
Create logic to switch between scenes (login → gameScene).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Scene changes correctly
- No crashes during switch
- Previous scene stops rendering

Issue 13: [frontend] Render player idle sprite

🚀 Technical Description
Display player sprite in idle state when no input is detected.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Idle sprite displayed
- No animation when idle
- Correct positioning

SPRINT 2 – COMBAT + ENEMIES (NO BACKEND)

Issue 14: [gameplay] Create enemy base object

🚀 Technical Description
Define the base enemy object structure including position, HP, damage, and basic properties.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Enemy object created
- Properties defined (HP, damage, position)
- Object reusable for multiple enemies

Issue 15: [gameplay] Render enemy sprites

🚀 Technical Description
Draw enemy sprites on canvas and ensure they appear correctly in the scene.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Enemy sprite rendered
- Correct position
- Multiple enemies supported

Issue 16: [gameplay] Implement enemy basic movement

🚀 Technical Description
Add simple enemy movement (e.g., patrol or static with slight movement).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Enemy moves or animates
- Movement consistent
- No erratic behavior

Issue 17: [gameplay] Implement attack trigger (J key)

🚀 Technical Description
Detect when player presses J and trigger attack state.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- J key detected
- Attack state triggered
- Cannot spam attack

Issue 18: [gameplay] Create attack hitbox

🚀 Technical Description
Generate a temporary hitbox in front of the player during attack.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
3h

🚀 Checklist

- Hitbox appears in front
- Direction matches player
- Hitbox disappears after attack

Issue 19: [gameplay] Detect hitbox collision with enemies

🚀 Technical Description
Check if attack hitbox overlaps with any enemy.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Collision detected correctly
- Works with multiple enemies
- No false positives

Issue 20: [gameplay] Apply damage to enemies

🚀 Technical Description
Reduce enemy HP when hit by player attack.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- HP reduced on hit
- Correct damage value applied
- No damage when out of range

Issue 21: [gameplay] Implement enemy death removal

🚀 Technical Description
Remove enemy from array when HP reaches zero.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Enemy removed when HP ≤ 0
- No further rendering
- No further collision

Issue 22: [gameplay] Create player hitbox

🚀 Technical Description
Define a collision box for the player to detect enemy attacks.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Hitbox matches player size
- Updates with movement

Issue 23: [gameplay] Implement enemy attack hitbox

🚀 Technical Description
Create attack area for enemies to damage the player.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Enemy hitbox created
- Triggered during attack
- Correct positioning

Issue 24: [gameplay] Detect enemy attack collision

🚀 Technical Description
Check overlap between enemy hitbox and player.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Collision detected
- Works reliably
- No multiple triggers per frame

Issue 25: [gameplay] Apply damage to player

🚀 Technical Description
Reduce player HP when hit by enemy.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- HP reduced
- Correct damage applied
- Damage only when hit

Issue 26: [frontend] Implement player health bar UI

🚀 Technical Description
Display player HP visually using a health bar or hearts.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2.5h

🚀 Checklist

- Health bar visible
- Updates on damage
- Clear to user

Issue 27: [gameplay] Add enemy spawn system

🚀 Technical Description
Spawn enemies at predefined or random positions in the level.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Enemies spawn correctly
- Multiple enemies supported
- No overlapping spawn issues

Issue 28: [gameplay] Basic enemy count tracking

🚀 Technical Description
Track how many enemies remain alive in the level.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
1.5h

🚀 Checklist

- Count decreases on death
- Accurate tracking
- Accessible globally

SPRINT 3 – GAME LOOP (LIVES, PAUSE, RESET)

Issue 29: [gameplay] Initialize player lives system

🚀 Technical Description
Create a system to initialize and store player lives at the start of a run (default = 5).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Lives variable initialized
- Default value set to 5
- Accessible globally

Issue 30: [gameplay] Detect player death

🚀 Technical Description
Trigger death logic when player HP reaches zero.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Detect HP ≤ 0
- Trigger death state
- Prevent further input

Issue 31: [gameplay] Subtract life on death

🚀 Technical Description
Reduce player lives by 1 when death occurs.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
1.5h

🚀 Checklist

- Lives decrease correctly
- No negative values
- Only triggers once per death

Issue 32: [gameplay] Reset level on death

🚀 Technical Description
Reset level state after player death while keeping remaining lives.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Player position reset
- Enemies respawn
- State cleared correctly

Issue 33: [gameplay] Restore player HP on respawn

🚀 Technical Description
Restore player HP to full after death.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
1.5h

🚀 Checklist

- HP reset to max
- Health UI updated

Issue 34: [gameplay] Implement Game Over condition

🚀 Technical Description
End the run when player lives reach zero.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Lives = 0 triggers Game Over
- Gameplay stops
- Transition to game over state

Issue 35: [frontend] Create Game Over screen

🚀 Technical Description
Display a Game Over screen with message and restart option.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2.5h

🚀 Checklist

- Message displayed
- Restart option visible
- UI clear and centered

Issue 36: [frontend] Implement restart button logic

🚀 Technical Description
Allow player to restart game from Game Over screen.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Restart resets lives
- Game restarts correctly
- No leftover state

Issue 37: [gameplay] Implement pause toggle (ESC key)

🚀 Technical Description
Pause and resume the game using ESC key.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- ESC toggles pause
- Game loop stops
- Game loop resumes

Issue 38: [frontend] Render pause menu overlay

🚀 Technical Description
Display pause menu with options (Continue, Restart, Exit).

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2.5h

🚀 Checklist

- Overlay visible
- Options displayed
- Does not break game rendering

Issue 39: [frontend] Implement pause menu buttons

🚀 Technical Description
Add interaction logic for pause menu buttons.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- Continue resumes game
- Restart resets level
- Exit returns to menu

Issue 40: [gameplay] Freeze game state during pause

🚀 Technical Description
Ensure all game logic stops when paused (movement, enemies, timers).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Player stops moving
- Enemies stop
- No updates during pause

Issue 41: [gameplay] Implement basic level completion condition

🚀 Technical Description
Detect when all enemies are defeated and trigger level completion.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Enemy count = 0 triggers completion
- Game stops
- Transition starts

Issue 42: [frontend] Create level complete UI

🚀 Technical Description
Display a simple level complete message and continue button.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Message visible
- Continue button shown
- UI clear

Issue 43: [frontend] Implement next level transition

🚀 Technical Description
Move player to next level after completion.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Scene changes
- State resets correctly
- No bugs between levels

SPRINT 4 – CARDS SYSTEM (LOCAL)

Issue 44: [gameplay] Create card base object

🚀 Technical Description
Define a base card object structure including type (powerup/punishment), name, effect, and duration.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Card object created
- Properties defined (type, effect, duration)
- Reusable structure

Issue 45: [gameplay] Create local card pool

🚀 Technical Description
Define an array of all available cards (8 powerups and 7 punishments) with hardcoded values.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- 8 powerups created
- 7 punishments created
- All stored in array
- No duplicates

Issue 46: [gameplay] Track level elapsed time

🚀 Technical Description
Implement a timer to track how long the player has been in the level.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Timer starts on level start
- Timer updates each frame
- Accessible globally

Issue 47: [gameplay] Trigger card event at midpoint

🚀 Technical Description
Trigger card selection event when elapsed time reaches half of the level duration.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- Midpoint detected
- Event triggers once
- Game pauses automatically

Issue 48: [frontend] Create card selection overlay

🚀 Technical Description
Display a centered overlay showing 3 cards and UI elements.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Overlay visible
- Centered on screen
- Background dimmed

Issue 49: [frontend] Render 3 selectable cards

🚀 Technical Description
Display 3 cards visually with front face and basic info.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- 3 cards rendered
- Proper spacing
- Readable info

Issue 50: [frontend] Implement card selection logic

🚀 Technical Description
Allow player to click and select one card at a time.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- Only one card selectable
- Selected card highlighted
- Selection changes correctly

Issue 51: [frontend] Implement confirm button

🚀 Technical Description
Add confirm button that applies selected card.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Button appears after selection
- Click applies card
- Closes overlay

Issue 52: [frontend] Implement back/reset selection

🚀 Technical Description
Allow player to deselect card and choose again.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2h

🚀 Checklist

- Back button works
- Selection cleared
- Cards reselectable

Issue 53: [gameplay] Implement card distribution logic (Level 1)

🚀 Technical Description
Ensure Level 1 always shows 2 powerups and 1 punishment randomly.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- 2 powerups selected
- 1 punishment selected
- Random selection works

Issue 54: [gameplay] Prevent duplicate cards in event

🚀 Technical Description
Ensure the same card cannot appear twice in a selection.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- No duplicates in selection
- Unique cards enforced

Issue 55: [gameplay] Create active effects system

🚀 Technical Description
Create a structure to track all active card effects during gameplay.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
3h

🚀 Checklist

- Effects stored in object
- Supports stacking
- Accessible globally

Issue 56: [gameplay] Implement basic powerup effects

🚀 Technical Description
Implement core positive effects (speed, damage, heal).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Speed boost works
- Damage boost works
- Heal applies instantly

Issue 57: [gameplay] Implement basic punishment effects

🚀 Technical Description
Implement core negative effects (damage reduction, HP loss, restrictions).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Damage reduction works
- HP loss applied
- Restrictions applied

Issue 58: [gameplay] Resume game after card selection

🚀 Technical Description
Resume gameplay after selecting and applying a card.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Game unpauses
- State restored correctly
- No bugs after resume

SPRINT 5 – BACKEND + FAME SYSTEM

Issue 59: [database] Deploy database schema

🚀 Technical Description
Execute the SQL schema to create all required tables and relationships in MySQL, including seed data for archetypes, levels, and cards.

🚀 Associated Software
MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
3.5h

🚀 Checklist

- Tables created
- Relationships working
- Seed data inserted
- Constraints verified

Issue 60: [API] Initialize Node.js + Express server

🚀 Technical Description
Set up a Node.js project with Express to act as API layer between frontend and database.

🚀 Associated Software
JavaScript (Node.js, Express)

🚀 Ideal Candidate
José / Dani

🚀 Time Estimate
4h

🚀 Checklist

- Server runs locally
- Express configured
- JSON handling enabled

Issue 61: [API] Configure MySQL connection

🚀 Technical Description
Connect API server to MySQL database using environment variables.

🚀 Associated Software
Node.js + MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
3h

🚀 Checklist

- DB connection established
- Uses .env variables
- Handles connection errors

Issue 62: [API] Implement authentication endpoints

🚀 Technical Description
Create POST /register and POST /login endpoints to handle user authentication.

🚀 Associated Software
Node.js + Express

🚀 Ideal Candidate
José

🚀 Time Estimate
4h

🚀 Checklist

- /register inserts user
- /login validates credentials
- Returns user ID
- Error handling included

Issue 63: [frontend] Replace mock login with API integration

🚀 Technical Description
Replace hardcoded login logic with real API calls to authentication endpoints.

🚀 Associated Software
JavaScript (Frontend + API)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Fetch POST request works
- Success response handled
- Error messages displayed

Issue 64: [API] Implement GET catalog endpoints

🚀 Technical Description
Create endpoints to retrieve archetypes, levels, enemies, and cards.

🚀 Associated Software
Node.js + MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
3.5h

🚀 Checklist

- GET /arquetipos works
- GET /niveles works
- GET /cartas works

- GET /enemigos works

Issue 65: [frontend] Fetch game data from API

🚀 Technical Description
Load archetypes, levels, and cards dynamically from API instead of hardcoded values.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Data fetched correctly
- Stored in game state
- No hardcoded data remains

Issue 66: [gameplay] Implement fame calculation logic

🚀 Technical Description
Compare player completion time against target time to determine fame result.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
3h

🚀 Checklist

- Time comparison works
- Famous vs Not Famous determined

- Logic accurate

Issue 67: [gameplay] Implement fame reward system

🚀 Technical Description
Apply rewards based on fame result (modify deck pool).

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
3h

🚀 Checklist

- Famous rewards applied
- Not Famous rewards applied
- Deck pool updated

Issue 68: [frontend] Create fame bar UI

🚀 Technical Description
Display a visual fame bar that reflects player progression.

🚀 Associated Software
JavaScript (Canvas)

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2.5h

🚀 Checklist

- Bar visible
- Updates correctly

- Scales properly

Issue 69: [frontend] Animate fame bar

🚀 Technical Description
Add smooth animation to fame bar when it updates.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Smooth animation
- No visual glitches
- Matches new value

Issue 70: [API] Implement POST run endpoints

🚀 Technical Description
Create endpoints to store run data (partida, nivel, cartas, enemigos).

🚀 Associated Software
Node.js + MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
4h

🚀 Checklist

- POST /partida works
- POST /nivel-especifico works

- POST /carta-usada works
- POST /enemigo-usado works

Issue 71: [frontend] Send run data to API

🚀 Technical Description
Send gameplay data to backend during and after runs.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
José

🚀 Time Estimate
3h

🚀 Checklist

- Data sent correctly
- IDs handled properly
- No data loss

Issue 72: [database] Create SQL views

🚀 Technical Description
Create views for safe querying and statistics aggregation.

🚀 Associated Software
MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
4h

🚀 Checklist

- Views created

- Aggregations correct
- Query tested

Issue 73: [API] Connect API to SQL views

🚀 Technical Description
Modify API endpoints to use SQL views instead of base tables.

🚀 Associated Software
Node.js + MySQL

🚀 Ideal Candidate
Esteban

🚀 Time Estimate
2.5h

🚀 Checklist

- API uses views
- Data consistent
- Queries optimized

SPRINT 6 – WEB + STATS + FINAL INTEGRATION

Issue 74: [web] Create main website structure

🚀 Technical Description
Build the main HTML structure with a centered game canvas and navigation tabs (Home, Story, Tutorial, Credits).

🚀 Associated Software
HTML, CSS, JavaScript

🚀 Ideal Candidate
José

🚀 Time Estimate
3h

🚀 Checklist

- Navigation bar created
- Canvas centered
- Sections defined
- Layout responsive

Issue 75: [web] Implement tab navigation logic

🚀 Technical Description
Allow switching between Home, Story, Tutorial, and Credits sections dynamically.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2h

🚀 Checklist

- Tabs clickable
- Correct content displayed
- No page reload needed

Issue 76: [web] Style website with consistent theme

🚀 Technical Description
Apply CSS styling consistent with Roman/pixel-art theme of the game.

🚀 Associated Software
CSS

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Consistent colors
- Fonts applied
- UI clean and readable

Issue 77: [web] Embed game canvas into website

🚀 Technical Description
Integrate the existing game canvas into the Home section of the website.

🚀 Associated Software
JavaScript, HTML

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Canvas visible
- Game runs correctly
- No layout break

Issue 78: [web] Create statistics panel layout

🚀 Technical Description
Design a panel around the canvas to display game statistics.

🚀 Associated Software
HTML, CSS

🚀 Ideal Candidate
José

🚀 Time Estimate
3h

🚀 Checklist

- Panel positioned correctly
- Does not overlap canvas
- Space for all stats

Issue 79: [web] Fetch statistics from API

🚀 Technical Description
Retrieve statistics data from API endpoints using fetch.

🚀 Associated Software
JavaScript, API

🚀 Ideal Candidate
Dani

🚀 Time Estimate
2.5h

🚀 Checklist

- API call works
- Data received correctly
- Error handling included

Issue 80: [web] Display real-time statistics

🚀 Technical Description
Render statistics such as total runs, wins, losses, and averages on the panel.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Data displayed correctly
- Values update
- Clear formatting

Issue 81: [web] Implement auto-refresh for statistics

🚀 Technical Description
Automatically update statistics panel without reloading the page.

🚀 Associated Software
JavaScript

🚀 Ideal Candidate
Ariel

🚀 Time Estimate
2h

🚀 Checklist

- Auto-refresh works
- No performance issues
- Data stays consistent

Issue 82: [web] Write tutorial content

🚀 Technical Description
Create and format tutorial explaining controls, mechanics, and systems.

🚀 Associated Software
HTML, CSS

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
2.5h

🚀 Checklist

- Controls explained
- Systems explained
- Easy to understand

Issue 83: [web] Write story content

🚀 Technical Description
Create story section describing game context and levels.

🚀 Associated Software
HTML, CSS

🚀 Ideal Candidate
José

🚀 Time Estimate
2h

🚀 Checklist

- Story written
- Matches game theme
- Clear narrative

Issue 84: [web] Create credits section

🚀 Technical Description
Display team members and roles in the credits tab.

🚀 Associated Software
HTML, CSS

🚀 Ideal Candidate
Dani

🚀 Time Estimate
1.5h

🚀 Checklist

- Names displayed
- Roles defined
- Clean layout

Issue 85: [integration] Connect all systems end-to-end

🚀 Technical Description
Ensure frontend, gameplay, API, and database work together seamlessly.

🚀 Associated Software
Full Stack

🚀 Ideal Candidate
All team

🚀 Time Estimate
4h

🚀 Checklist

- Login works
- Game runs
- Data saved
- Stats update

Issue 86: [testing] Perform full system testing

🚀 Technical Description
Test all features including gameplay, API, and UI to detect bugs.

🚀 Associated Software
Full Stack

🚀 Ideal Candidate
All team

🚀 Time Estimate
3h

🚀 Checklist

- Gameplay tested
- API tested
- UI tested
- Bugs identified

Issue 87: [testing] Fix critical bugs

🚀 Technical Description
Resolve major bugs found during testing phase.

🚀 Associated Software
Full Stack

🚀 Ideal Candidate
All team

🚀 Time Estimate
4h

🚀 Checklist

- Critical bugs fixed
- Game stable
- No crashes

Issue 88: [polish] Improve UX and visual feedback

🚀 Technical Description
Enhance animations, feedback messages, and overall user experience.

🚀 Associated Software
JavaScript, CSS

🚀 Ideal Candidate
Sofi

🚀 Time Estimate
3h

🚀 Checklist

- Smooth transitions
- Clear feedback
- Better visuals
